Free Download Full Version here. Regidb is a FREE System Optimizer program for Windows that will help optimize your PC. It will remove bugs, viruses, slowdowns and start up issues while also identifying CPU. The invention relates to a control device for a gas mixer, preferably for a gas mixer for air/fuel mixtures, that has a first port for the feed of an air/fuel mixture into the interior of the gas mixer and a second port for the feed of a secondary mixture or of ambient air into the interior of the gas mixer, and having at least one feed line from the first port to the second port, which feed line is divided in two and has a first and a second connection. A gas mixer is understood to be an apparatus for mixing air with gas, e.g. a fuel gas, before this mixture is conveyed to a combustion chamber. The gas mixer is preferably provided with a gas supply to the mixer by means of which the gas mixer can be supplied with the fuel gas. The air is introduced into the gas mixer in such a way that the air and the fuel gas are first introduced into an air prechamber through which the air/fuel mixture is carried to the gas mixer. The air/fuel mixture is mixed in the gas mixer, which comprises a first and a second mixing chamber, at least one port for introducing the air/fuel mixture into the first mixing chamber and a port for introducing the ambient air into the second mixing chamber. Gas mixers are known per se from the prior art. In this context, DE 101 57 630 A1, for example, describes a gas mixer that is designed with a two-part mixing chamber. The mixing chamber of the known gas mixer has a first and a second mixing chamber. In the first mixing chamber, the ambient air and the air/fuel mixture are mixed, whereas in the second mixing chamber, the air/fuel mixture is mixed with the combustion air. The second mixing chamber is provided with a tangential air outlet that is designed with a central cross section and that runs on a circular path and provides a strong swirling of the air/fuel mixture. By means of this swirling, a uniform combustion of the air/fuel mixture takes place. The mixing chamber is in turn connected to an ann 82157476af
